
What the conditional density measures
(a) BPD vs wet fraction, by season
JF
MAM
JJAS
OND
bits per interior dimension
wet fraction
(b) BPD vs extremity, wet fraction removed
(rho=0.053, wet fraction only, no season control here)
BPD, rank-residual after removing wet fraction
extremity, rank-residual after removing wet fraction
(c) Variance partition, added in this order
incremental R^2
0.986
0.006
0.003
0.000
wet fraction
domain mean intensity
season
spatial organization
(d) Within-season partial correlation, with 95% CI
OVERALL
JF
MAM
JJAS
OND
partial Spearman rho (extremity vs BPD | wet fraction, season)
